SPECIAL PROVISION

SAMPLING AND TESTING OF MATERIALS

All sampling and testing services shall be performed by an independent testing agency that operates in accordance to ASTM D3470 and E329, latest edition and accepted by the County Engineer, at the Contractor's expense. All sampling testing required for the project will be in accordance with the GDOT Sampling, Testing and Inspection Guidelines except as modified here. It is understood that these are the minimum testing requirements and that additional testing may be requested by the Engineer. A minimum of 24 hours notice shall be given to the County Project Manager prior to work which requires testing. A copy of all test reports shall be sent to the Project Manager and must be received prior to placement of the next lift if applicable and prior to any payment for the work. Written field reports are acceptable for compaction testing to expedite construction. Verbal approval will not be acceptable. The cost associated with testing shall be included in the bid price for that item.

A. Section 207 Backfill for Minor Structures - One sample per major soil type shall be taken to ensure that the material meets requirements for Class I or II Roadway Materials as per GDOT Standard Specification 810.2.01. One in-place density test shall be taken for every three lines of longitudinal pipe between drainage structures or every 500 feet, whichever is less. One in-place density test shall be taken for every line of storm drain pipe installed under road pavement. One in-place density test shall be taken for every three drainage structures. Required compaction is 95% of the maximum dry density with optimum moisture content as determined by the testing agency. Testing as per GDT 7.

B. Section 208 Embankment- One sample per major soil type shall be taken to ensure that the material meets the requirement for Class IIB3 or better soils as per GDOT Standard Specification 810.2.01. One in-place density test shall be taken per area of embankment constructed at one time on every other lift, or every 2,000 cubic yards, whichever is less. Required compaction is a minimum of 95% of the maximum dry density and optimum moisture content as determined by the testing agency. Any areas that fail a compaction test must pass a retest prior to any additional embankment being placed at that location. Testing as per GDT 7, 20, 21, 24a, 24b, 59, 67.

C. Section 209 Subgrade - One in-place density test shall be taken per every 500 linear feet, maximum 24 foot width, for each section set up at one time, of subgrade under the pavement. Subgrade testing under miscellaneous concrete or shoulders shall be at intervals of no less than 500 ft. for each section set up at one time. Compaction shall be a minimum of 100% of maximum dry density and optimum moisture content as determined by the testing agency. Any areas that fail a compaction test must pass a retest prior to placement of subsequent lift. The subgrade shall be proof rolled with a loaded dump truck and approved by the Engineer prior to placement of any base course. Testing as per GDT 7, 20, 24a, 24b, 59, 67.

D. Section 310 Graded Aggregate Construction - One thickness measurement and one in-place density test per 500 linear feet, maximum 24 foot width, for each section set up at one time. Sections over 8 inches in depth will require testing in two lifts. A proof roll with a loaded dump truck may be required by the Engineer prior to placement of any asphalt or bituminous prime coat. Testing as per GDT 21, 59.

E. Section 400 & 402 Hot Mix Asphalt Construction – The Contractor is responsible for all Quality Control testing as required in Section 400 (On-system) and the Contractor shall hire an independent Testing Agency to perform Comparison Testing, Quality Assurance and Acceptance Testing as per Section 400 (On-system) with the following revisions:

1. Use of a Materials Transfer Vehicle (MTV) will not be required.
2. The adjustment period for density will be one day for each mix on each road.
3. Maximum air voids for all Superpave mixes must not exceed 7.8 percent for 100% pay factor on Lansing Avenue or the curb and gutter section on Central Avenue. Air voids must not exceed 7.0 for the reconstructed section of Central Avenue.
4. Laser road profile testing will not be completed. Contractor is to achieve the smoothest possible ride during construction.

The Testing Agency shall report density and voids to the nearest 0.1 on Form OMR-TM-150 and shall provide an Asphaltic Concrete Lot Report (similar to DOT159 and 159-5) with compaction, extraction, sieve and A/C test results and corresponding recommended pay factors for each Lot. These reports will be required prior to payment. This testing may be waived by the Engineer for Lansing Avenue.

F. Section 441 Miscellaneous Concrete - One set of test cylinders per each 100 cumulative cubic yards or one set per week if placement is less than 100 cumulative cubic yards per week. Air and slump test are required when cylinders are made and at least once each day when concrete is placed. Additional tests may be required as necessary to insure adequate control. Cylinders shall be tested at 28 days in accordance with ASTM C39.

G. Section 500 Concrete Structures - Two sets of test cylinders per each 50 cubic yards or fraction thereof placed daily per structure. Air and slump tests are required when cylinders are made and approximately every third load thereafter to insure adequate control. Cylinders shall be tested at 7 and 28 days in accordance with ASTM C39. Additional cylinders may be taken for early breaks as necessary.
